

GHN-Online works with its customers to ensure Coding & Compliance issues are properly addressed in the generation of Clean Code.

In today's challenging marketplace CPT & ICD coding compliance is vital to the success of any organization. Many facilities experience denials and delays in payer collections because of coding errors. A typical healthcare facility may experience errors in as many as 25 percent of its claims causing unnecessary rejections and delays in reimbursement times each month.

Preventing Coding Issues

After your claim has been submitted to GHN, it is analyzed by the Coding Compliance Trigger(CCT™). This process scans the uploaded claims for potential coding errors, compliance issues, or inconsistent combinations of clinical information. GHN can also compare these codes against Coding Compliance Edits, which can be established for your specific entity. The CCT notifies the user of potential compliance problems in real-time. This process takes place before the claims are submitted to the payer allowing code errors to be corrected online before the claim is rejected by the payer.

The CCT is an integrated application and is pre-loaded with edits for known risk areas, including:

- ICD-9
- CPT
- Critical Coding Initiative (CCI)
- Modifiers
- Custom CCTs
- RVU Calculations
- Associated Procedure Edits
- LCD/LMRP

Sustainable Benefits

- Increased net payer collections
- Enhanced compliance
- Maximized coder productivity
- Reduced re-billing and collection costs
- Lower coding costs
